

# Natiflash Calcium

Complementary  
Feed

**Reduces the risk of milk  
fever and subclinical  
hypocalcemia**

# Natiflash Calcium

An instantaneous supply of calcium at calving

## WHAT ?

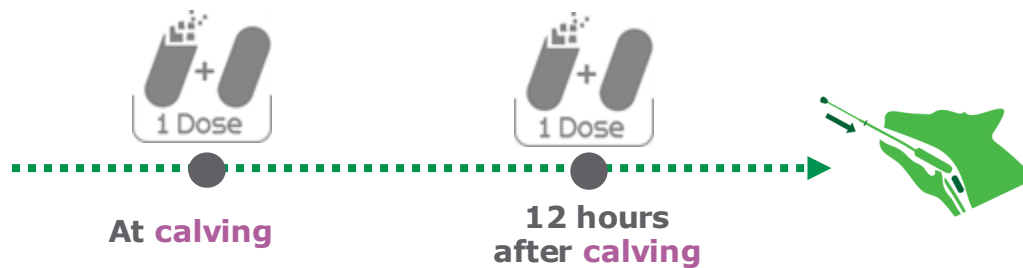

A dose of **Natiflash Calcium** brings:

- 82g of calcium within 24 hours
- 6 different sources of calcium: monocalcium phosphate, calcium carbonate, calcium gluconate, dicalcium phosphate, lithothamne and calcium citrate
- Quick availability of the calcium thanks to effervescent formula

Prevention of milk fever and subclinical hypocalcemia

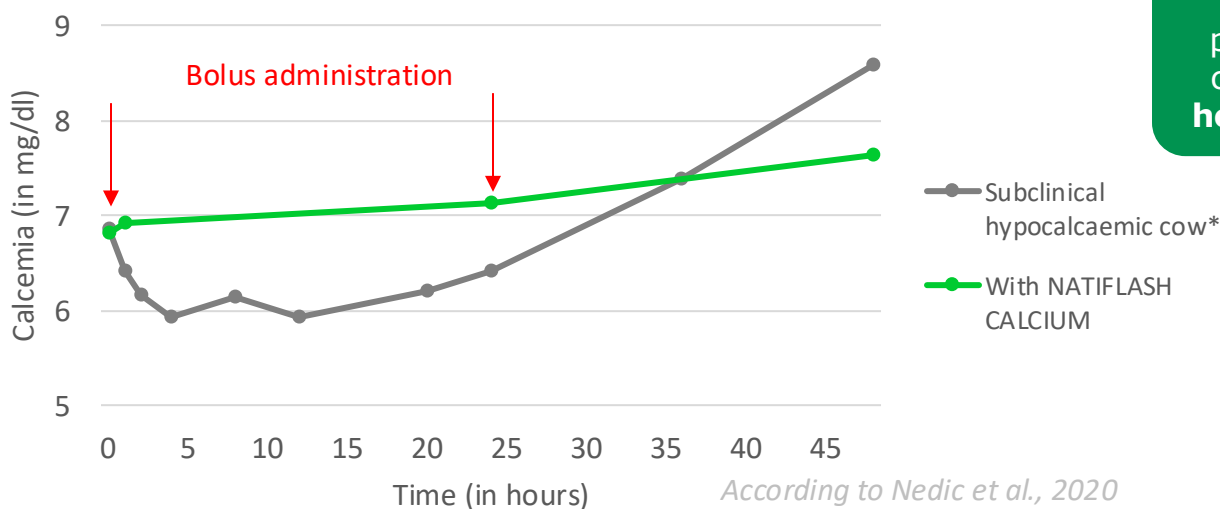

## HOW ?

One dose of **Natiflash Calcium** (1 effervescent + 1 controlled release bolus) at calving and another dose 12h after calving

## WHICH RESULTS ?

Figure: KFA trials Natiflash Calcium in Italy (n=69)

Both products prevent a drop in calcium blood **24 hours** after calving

## PACKAGING

- 1 case=3 doses (12 boluses) ≈ **3 cows**
