

## **Boliflash Calcium +**

Quick intake of calcium to reduce the risk of milk fever and subclinical hypocalcaemia

From Farm to Fork Kersia.

## Boliflash Calcium +

Quick intake of calcium to reduce the risk of milk fever and subclinical hypocalcaemia

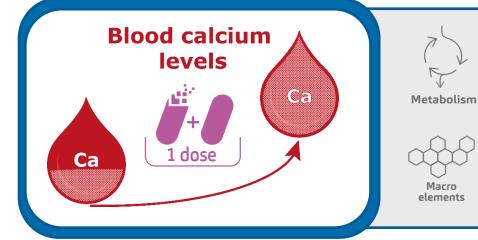

## **ADVANTAGES**

Reduction of the risk of milk fever and subclinical hypocalcemia by providing calcium right after calving

- ✓ High intake of **52.5g of calcium** with 1 application
- Contains phosphorus and vitamin D3 for optimal calcium assimilation
- ✓ **Dual speed assimilation:** a boost effect thanks to the rapid dissolution of the effervescent bolus (patented technology) and then a progressive intake thanks to the non-effervescent bolus

ROI: Invest 1E

**Supporting Pack:** 

- 8 sources of calcium
- ✓ 52.5g of calcium by doseapplication
- ✓ Additional vitamine D3
- ✓ Additional phosphorus

## WHEN & HOW

1. One dose of BOLIFLASH® CALCIUM + at calving signs (One dose = 1 effervescent + 1 controlled release bolus)

Macro elements

2. Second dose within 24 hours if deemed necessary by nutritionist or veterinarian
